Speech & Language Therapy (SLT)

Assessment • Diagnosis • Therapy

We provide speech therapy for children with speech and language delays, articulation disorders, cleft palate, hearing impairment, neurological conditions, and developmental disabilities. For adults, our services address communication and swallowing difficulties related to stroke, brain injury, voice disorders, and other neurogenic conditions.

ABOUT SLT

Speech & Language Therapy supports children and adults with difficulties in speech, language, communication, voice, fluency, and swallowing. At NeuroNest, therapy is evidence-based, individualized, and family-centered.

SLT Services for Children

- Speech delay and unclear speech
- Language delay (understanding or expression)
- Autism Spectrum Disorder (ASD)
- Attention deficit hyperactive disorder
- Down syndrome
- Social communication difficulties
- Stuttering and fluency problems
- Drooling and oral-motor difficulties
- Feeding concerns
- Cerebral Palsy and developmental conditions
- Hearing loss (including cochlear implant users)

SLT Services for Adults

- Aphasia (post-stroke language difficulties)
- Dysarthria and motor speech disorders
- Stuttering in adolescents and adults
- Voice problems (hoarseness, strain, voice fatigue)
- Swallowing difficulties (dysphagia)
- Communication issues due to neurological conditions
